

PENTAMIX EX 5

Pentamix EX 5 is a shrinkage compensating and reducing additive in powder form.

- ☑ In the first hours, according to its dosage, it compensates plastic shrinkage with a checked and nonviolent expansion.
- ☑ In the second phase, it reduces the hydraulic shrinkage and it strongly decreases the dimensional stress of the mortar.
- ☑ It works at very low dosages.
- ☑ It does not lose its efficiency over time.
- ☑ It has a slight accelerating effect in the alumina cement, which can lead to a decrease of their dosage.

Trends of shrinkages at different dosages on a standard mortar of **Pentachem**
